                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         glycoconjugates.
--- CATALNITC ACTIVITY: Hydrolysis of alpha-(2--3)-, alpha-(2--6)-, alpha-(2--8)-glycosidic linkages of terminal sialic residues in oligosaccharides, glycoproteins, glycolipids, colominic acid and synthetic substrates.
--- SUBCELLULAR LOCATION: Membrane-associated.
--- TISSUE SPECIFICITY: Highly expressed in skeletal muscle, testis, adrenal gland and thymus, followed by pancreas, liver, heart and thymus. Weakly expressed in kidney, placenta, brain and lung.
--- MISCELLANEOUS: Optimum ph is 3.8
--- SIMILARITY: Contains 3 BNR repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   associated to the plasma membrane.";
Biochem. 0. 349:343-351(2000).
-!- FUNCTION: Plays a role in modulating the ganglioside content of the lipid bilayer at the level of membrane-bound sialyl
                                                                                                                                                                                                                             Homo sapiens (Human).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
FUNCTION: Plays a role in cephalic patterning. Probable subunit of a heterodimeric regulatory protein involved in the control of head morphogenesis.

DEVELOPMENTAL STAGE: Localized to the mandibular segment and the hypopharyngeal and labral primordia first detectable in late
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ∑ ω

-!- FUNCTION: Bidirectionally degrades single-stranded DNA into large acid-insoluble oligomucleotides, which are then degraded further into small acid-soluble oligomucleotides (By similarity).

-!- CTAINTIC ACTUUTY: Exomucleolytic cleavage in either 5 · to 3 · or 3 · to 5 · direction to yield mucleoside 5 · phosphates.

-!- SUBUNIT: Heterooligomer composed of large and small subunits (By

                                    Nature 188:539-547(1997).

Nature 188:539-547(1997).

Nature 188:539-547(1997).

Nature 2 position: Converts lysphosphatidic acid by incorporating acyl moiety at the 2 position.

Natural Acrivity: Acyl-CoA + 1-acyl-sn-glycerol 3-phosphate = CCA + 1,2-diacyl-sn-glycerol 3-phosphate.

Natural De novo phospholipid biosynthesis; second step.

NATHWAY: De novo phospholipid biosynthesis; second step.

NATHWAY: Belongs to the 1-acyl-sn-glycerol-3-phosphate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          15-MAR-2004 (Rel. 43, Last sequence update)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        closely related bacteria.";
Nature 423:81-86(2003).
-!- FUNCTION: Catalyzes the ATP-dependent amination of UTP to CTP with
                                                                                                                                                     and mouse cDNA sequences.";

Proc. Natl. Acad. Sci. U.S. 99:16899-16903(2002).

Proc. Natl. Acad. Sci. U.S. Debendent deacetylase (By similarity).

-!- FUNCTION: Probable NAD(+) + an acetylprotein = nicotinamide + O-

-!- CATALYTIC ACTIVITY: NAD(+) + an acetylprotein = nicotinamide + O-

-!- CATALYTIC ACTIVITY: Deform to the sirtuin family.

-!- SIMILARITY: Belongs to the sirtuin family.

-!- SIMILARITY: Contains 1 deacetylase sirtuin-type domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

"Activating signal cointegrator 2 belongs to a novel steady-state
"Activating signal cointegrator 2 trithorax group proteins.";
Mol. Cell. Biol. 23:140-149(2003)
-!- FUNCTION: May be involved in transcriptional regulation.
-!- FUNCTION: May be involved in transcriptional regulation.
-!- FUNCTION: May be involved in transcriptional regulation.
-!- SUBUNIT: Belongs to the ASC-2/NCOA6 complex (ASCOM), which contains ASC-2/NCOA6, the retinoblastoma-binding protein RBQ-3/RBP5, alpha- and beta-tubulins, the trithorax group proteins mills and MLL3, and ASH2/ASCL2.
-!- SUBCELLULAR LOCATION: Nuclear (Probable).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This sequence represents a peptide fragment from a novel human type ligand polypeptide corresponding to amino acid residues 23 to 53 of the sequence represented in AMM1390 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaccutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, clistophrenia, trauma, growth hormone secretory disease, hyper- and polyphagia, hyperlipidaemia, hypercholesterolaemia, hyperglycelactinaemia, asthma, cancer, pancreatitis, renal disease, Turner's syndrome, neurosis, asthma, reheumatoid arthritis, spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinal pincerebellar degeneration, bone fracture, trauma, atopic dermatitis, spinal pincerebellar degeneration, bone fracture, trauma, atopic dermatitis, spinal pincerebellar degeneration, sassays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein
                                                                                                                                ö

This is the amino acid sequence of the human pituitary G protein-coupled receptor ligand 19P2L. A method suitable for commercial high-level production of 19P2L comprises expressing the ligand in host cells as a recombinant fusion protein much human basic fibroblast growth factor (see AAV83796-97) that has been modified to include an N-terminal collowed by ammonolysis. 19P2L has prolactin secretion-stimulating and closed in the treatment and prevention of various diseases including: senile senelation of the treatment and prevention of various diseases (e.g. of the treatment and prevention of various diseases (e.g. pick's disease, Huntington's disease), infectious diseases (e.g. pick's disease, Huntington's disease), infectious diseases (e.g. pick's disease, Huntington's disease), infectious diseases (e.g. brain trugs, metal and organic compounds), tumourigenic diseases (e.g. brain trugs, metal and organic compounds), tumourigenic diseases (e.g. brain trugs, metal and organic compounds), thourigenic diseases (e.g. brain trugs, metal and organic diseases (e.g. chronic subarachnoidal heamorrhage, and cher types of dementia, depression, hyperactive child syndrome (microencephalopathy) and disturbance of consciousness. It is also useful for prevention and treatment of diseases associated with prolactin hype pituitary adenoma, breast cancer, infertility, impotence and autoimmune disease (incease (incease), infertility, impotence and autoimmune disease (incease), and seminal vestice (incease), and seminal vestice (incease).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                disease (hypersecretion disorders), and seminal vesicle hypoplasia, osteoporosis, menopausal syndrome and renal failure (hyposecretion disorders). The 1992 polypeptide/amide is also useful as a test reagent for study of the prolactin secretory function or as a lactogogue in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g.
                                                                                                                                                                                                                                                                                                                                         1992 ligand, G protein coupled receptor; pituitary;
prolactin releasing peptide; human; dementia; breast cancer; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Producing a 19P2 pituitary G protein receptor ligand - by cleavage of fusion protein, useful for preventing and treating dementia, breast cancer, renal failure and autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nishimura O;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a human type ligand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing typoweatholism. They can by used for promoting lyndrome, euthyroid or hypomecabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin print the promoting prolactin as secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease, prolactinoma, infertility, impotence, amenorthea, galactorrhea, acromegaly, chiarifrommer isyndrome, Argonz-del Castilo Syndrome, Forbes-Albright syndrome, lymphoma, Sheehan syndrome or dyszospermia. The inhibitory agents can also be used for treating or preventing choricocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus, abnormal lipidmetabolism or oxytocia

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             its derivative.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative sequences ANY49290-302 represent peptide fragments of the 19P2 ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                              Monoclonal antibody, 19P2 ligand; diagnosis; prolactin secretion; pituitary; regulatory mechanism; central nervous system; pancreatic.

NAME OF THE PROPERTY OF THE PR

Thibaudeau K;

DĽ,

```
The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a reactive group (II) (e.g. succinimidy) and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptides or 3.50 amino acids.

(I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body.

Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases

The substance of the present invention be used in the exemplification of the present invention
                                                                                                                                                                                                                                                                       Modifying and attaching therapeutic peptides to albumin prevents peptidase degradation, useful for increasing length of in vivo activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human, corticotrophin releasing hormone, CRH, G protein receptor ligand, analgesic, hyperaldosteronism, hypercortisolaemia, hypoadrenocorticism, Addison's disease, adrenal gland hyperfunction; obesity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human CRH releasing protein related peptide SEQ ID NO: 32

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, terine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion
                                                              Human; oxytocin secretion promoter; G protein-coupled receptor protein; treatment; disease; pain; atonic bleeding; uterine recovery failure; cow; caesarean section; artificial fertilization; galactostasis; goat; pig; veterinary, medicine; milk production.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary medicine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Protection, endogenous therapeutic peptide, peptidase, conjugation, blood component, modification, succinimidyl, maleimido group, amino, hydroxyl, thiol; hormone, growth factor; neurotransmitter.

                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; wakefulness; sleep disorder; prolactin releasing peptide receptor; PrRP; GPR10; therapy; epilepsy; narcolepsy; sleepiness; sleep apnoea; insomnia; idiopathic hypersomnia; psychogenic hypersomnia; seizure;
                                         protein receptor ligand or peptide for controlling corticotropin
                                                                                          The present sequence describes a method of controlling the secretion of corticotrophin releasing hormone (CRH), involving the use of a G protein receptor Ilgand. This can be used to control the secretion of CRH and is useful as an analgesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypodrenocorticism, Addison's disease (including boredom, nausee, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The present sequence is a peptide used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to a method of screening for compounds for promoting wakefulness or sleep in a mammal. The method involves administering a prolactin releasing peptide (PrRP) receptor (GFRIO)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ening for compounds useful for promoting wakefulness or sleep, and treating sleeping disorders, e.g. insomnia, hypersomnia or sleep a, comprises administering a prolactin releasing peptide agonist or

The method is for producing (low-molecular) peptides e.g. KisS-1 peptide and GRRB ligand for subsequent applications by the gene recombination technique through tandem repeats to provide a precursor protein with specific cleavage sites. With this method, peptide production can be carried out easily to provide large quantities of the required peptides. This is the amino acid sequence of a peptide associated with the peptide production method of the invention
compound to promote wakefulness or sleep. The compounds identified from the method are used in the therapy of epilepsy and other diseases associated with absence seizures and in promoting wakefulness and sleep in individuals having sleep disorders such as insomnia and narcolepsy. PTRP receptor agonists may be used to treat common disorders which lead to sleepiness, e.g. sleep aposea, narcolepsy, idiopathic hypersomnia and psychogenic hypersomnia. PTRP receptor antagonists are useful for disorder and psychophysiologic insomnia such as adjustment sleep disorder and psychophysiologic insomnia. The present sequence is human PTRP-31 peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Process for producing peptides e.g. KiSS-1 peptide and GPR8 ligand for subsequent applications by gene recombination technique through tandem repeats to provide precursor protein with specific cleavage sites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Peptide production by gene recombination associated peptide #27
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Peptide production; low-molecular peptide; KiSS-1; GPR8 ligand;

This invention relates to a novel human serine protease precursor polypeptide. Specifically, it refers to a novel type II transmembrane serine protease that participates in the control of hormones produced by the pancreatic gland. As such, it can be used in a screening method for the identification of compounds that are useful for the treatment of diseases where a neurohypophysical hormone participates, such as describes the compounds of this invention as antidiabetic and ophthalmological. This peptide sequence is human peptide 2 related to the human serine protease of the invention.
                             human, serine protease precursor, hormone, neurohypophysical, diabetes, diabetic, ophthalmological.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Protease precursor for developing treatment for diabetes and cataracts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           G protein-coupled receptor; ligand binding; pharmaceutical; modulator;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes a method of producing a peptide comprising the excision of the N and C-terminals of a target peptide with enzymes or chemically through the attached cleavage sites repeated by ligation in a precursor protein. The method is for producing (low-molecular) peptides e.g. KiSS-1 peptide and GPRB ligand for subsequent applications by the gene recombination technique through tandem repeats to provide a precursor protein with specific cleavage sites. With this method, peptide production can be carried out easily to provide large quantities of the required peptides. This is the amino acid sequence of a peptide associated with the peptide production method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Process for producing peptides e.g. KiSS-1 peptide and GPR8 ligand for subsequent applications by gene recombination technique through tandem repeats to provide precursor protein with specific cleavage sites.

This sequence represents a peptide fragment from a novel human type
ligand polypeptide corresponding to amino acid residues 23 to 54 of the
sequence represented in AMW31390 and is used in an assay to monitor
ligand binding to the G protein-coupled receptor protein. Pharmaceutical
compositions containing this ligand may be used as a pituitary function
modulator. An entral nervous system modulator or a particaric function
modulator. This ligand could have specific applications as a prophylactic
or therapeutic agent for dementia, depression, hyperkinetic syndrome,
content of consciousness, anxiety syndrome, schizophenia, trauma,
growth hormone secretory disease, hyper- and polyphagia, hyperlipidaemia,
hypercholesterolaemia, hyperglyceridaemia, hyperprolactinaemia, diabetes,
cancer, pancreatitis, renal disease, Turner's syndrome, neurosis, asthma,
cancer, pancreatitis, spinal injury, transient brain ischaemia epilepsy,
amylotrophic lateral sclerosis, acute myocardial infarction, infertility,
spinocerebellar degeneration, bone fracture, trauma, atopic dermatitis,
csteoporosis and/or oligogalactia. Assays can also be developed to screen
compounds which are capable of altering the binding activity of the
ligand affecting activation of the G protein-coupled receptor protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; oxytocin secretion promoter; G protein-coupled receptor protein; treatment; disease; pain; atonic bleeding; uterine recovery failure; coxcaesarean section; artificial fertilization; galactostasis; goat; pig; veterinary medicine; milk production.
                                                                                                                                                       Ligand peptide for G protein-coupled receptor - acts by modulating function in the central nervous system, pancreas and pituitary gland.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  corticotrophin releasing hormone (CRH), involving the use of a G protein receptor ligand. This can be used to control the secretion of CRH and is useful as an analgesic or for treating, preventing or ameliocrating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypoadrenocorticism, Addison's disease (including boredom, nausea, pigmentation, hypogonadism, hair
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human, corticotrophin releasing hormone, CRH, G protein receptor ligand, analgesic, hyperaldosteronism, hypercortisolaemia, hypoadrenocorticism, Addison's disease, adrenal gland hyperfunction; obesity.
                                                                                                                                    This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weapains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence describes a method of controlling the secretion of
                             Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary medicine.
                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                      .
                                                                                                                                                                                                                                                                                                                                                                                 99.4%; Score 165; DB 3; Length 32; 100.0%; Pred. 1 Genence 15. Application US/0932161

2 Patent No. US2020037533A1

3 GENERAL INCRRATION:

3 APPLICANT: Civelli, Olivier

3 APPLICANT: Civelli, Olivier

3 APPLICANT: Lin, Steven

3 TITLE OF INVENTION: Screening and Therapeutic Methods For

3 TITLE OF INVENTION: Screening and Therapeutic Methods For

3 TITLE OF INVENTION: Screening and Therapeutic Methods For

3 TITLE OF INVENTION: Screening and Therapeutic Methods For

4 TITLE OF INVENTION: Proceeding and Therapeutic Methods For

5 TITLE OF INVENTION: Proceeding and Therapeutic Methods For

6 TITLE OF INVENTION: Proceeding And Sleep

7 CURRENT FILING DATE: 2000-04-28

8 FILE REFERENCE: P.UC 4579

8 FILE REFERENCE: P.UC 4679

9 PAPLICANT: D. UC 096-777-15

9 PAPLICANT: CIVELLI, OLIVIER

9 PAPLICANT: CIVELLI, OLIVIER

9 PAPLICANT: CIVELLI, OLIVIER

9 PAPLICANT: Lin, Steven

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                            Avcludease ABC chain A - Methanobacterium thermoautotrophicum (strain Delta H)
N.Alternate names: uvrA protein
C.Species: wethanobacterium thermoautotrophicum
C.Species: Methanobacterium thermoautotrophicum
C.Date: 05-Dec-1997 #sequence_revision 05-Dec-1997 #text_change 02-Feb-2001
C.Accession: H69157

Nature 393:272-276(1998).

-! FUNCTION: Stimulates prolactin (PRL) release and regulates the expression of prolactin through its receptor GPR10. May stimulate lactorrophs directly to secrete PRL.

-! TISSUE SPECIFICITY: Medulla oblongata and hypothalamus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              30-MX-2000 (Rel. 39, Created)

May stimulate lactorophs directly to secrete PRL.
                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                        Biochem. J. 349:343-351(2000).
-!- FUNCTION: Plays a role in modulating the ganglioside content of the lipid bilayer at the level of membrane-bound sialyl glycoconjugates.
-!- CATALYTIC ACTIVITY: Hydrolysis of alpha-(2->3)-, alpha-(2->6)-, alpha-(2->8)-glycosidic linkages of terminal sialic residues in oligosaccharides, glycoproteins, glycolipids, colominic acid and synthetic substrates.
                                                                                                                                                                                                                                                                                                                                                                                                    TISSUE SPECIFICITY: Highly expressed in skeletal muscle, testis, adrenal gland and thymus, followed by pancreas, liver, heart and thymus. Weakly expressed in kidney, placenta, brain and lung. MISCELLANEOUS: Optimum pH is 3.8 SIMILARITY: Belongs to family 33 of glycosyl hydrolases. SIMILARITY: Contains 3 BNR repeats.

                                                                                                                     The human L(3)MBT Polycomb group protein is a transcriptional repressor and interacts physically and functionally with TEL repressor and interacts physically repressive state of genes, probably via a compliant properties and interacts with repressive state of genes, probably via a compliant properties and interacts with repressive 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  telophase.
SIMILARITY: Contains 3 mbt domains.
CAUTION: Ref.3 (CAC18508) sequences differ from that shown due to erroneous gene model prediction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ISOUS SPECIFICITY: Widely expressed. Expression is reduced in TISSUE SPECIFICITY: Widely expressed. Expression is reduced in colorectal cancer cell line SW480 and promyelocytic leukemia cell line HL-60.

DEVELOPMENTAL STAGE: In interphase cells, it is scattered throughout the nucleoplasm. In mitotic cells, it strongly associates with condensed chromosomes from the prophase to
"Prediction of the coding sequences of unidentified human genes. X. The complete sequences of 100 new cDNA clones from brain which can code for large proteins in vitro.";
DNA Res. 5:169-176(1998).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      IsoId=09Y468-3; Sequence=VSP_003901, VSP_003902;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     IsoId=29Y468-2; Sequence=VSP_003902;

-!- FUNCTION: Component of a cytoskeletal structure that is required
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 for the formation of endocytic vesicles at the plasma membrane level. Could be implicated in cytoskeletal reorganization in response to environmental stresses and could act in the budding site selection mechanism. Binds to actin.

SIMILARITY: Contains 1 BAR domain.
SIMILARITY: Contains 1 SH3 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GermOnline; 140880; -.
